Get Brief Insights Into the technologies we operate

About Bitcoins

Bitcoin is a digital currency created in January 2009 following the housing market crash. It follows the ideas set out in a whitepaper by the mysterious and pseudonymous Satoshi Nakamoto. The identity of the person or persons who created the technology is still a mystery. Bitcoin offers the promise of lower transaction fees than traditional online payment mechanisms and is operated by a decentralized authority, unlike government-issued currencies.

About Ethereum

Ethereum is a technology that lets you send cryptocurrency to anyone for a small fee. It also powers applications that everyone can use and no one can take down. It's the world's programmable blockchain. ... But Ethereum is programmable, so you can also use it for lots of different digital assets

About Tron

The TRON project saw its initial life during the crypto bull market in 2017. It quickly gained the attention of many crypto enthusiasts and investors, growing dramatically in size. The protocol has attracted as many detractors as it has supporters over the years. From its approach of adapting existing technologies into its platform (which some people argued were much further than inspiration) to a heavy reliance on marketing and publicity stunts than any meaningful technological advances. Tron has remained a controversial project from the very beginning.
